VIT BHOPAL UNIVERSITY

Project Report on

“DIGITAL LITERACY AWARENESS"

Course Code: CSE0001

Name: Manya Goyal
Registration Number: 25BCY10228
Branch: B.Tech CSE (Cyber Security and Digital Forensics)
Year: 1st Year
Course Title: Digital Literacy
Date: 31/03/2026

Introduction

This project is based on the concept of digital literacy, where I took on the role of a Student Digital Ambassador. The main objective of this project is to understand and promote the effective and responsible use of digital tools among students. In today's digital age, having basic knowledge of online platforms, communication, and safety practices is essential.

Through this project, I completed a series of tasks including creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, practicing professional communication, and studying cybercrime awareness.

Each task helped me develop practical skills that are useful for both academic and professional growth.

Write-ups

Task-1

In this task, I created an infographic to raise awareness about digital literacy. The infographic was designed using Canva, an online design tool. It explains the concept of digital literacy and highlights key aspects such as what is digital literacy, safe internet practices, useful digital tools for students and professional online presence.

The main objective of this infographic is to present important digital knowledge in a clear and easy-to-understand format. While designing the infographic, I found it interesting to organize information visually and make it appealing for students. At the same time, it was slightly challenging to include all important points in a limited space without making it look crowded.

Overall, this task helped me understand how visual content can be used effectively to spread awareness and communicate important ideas.

Task-2

In this task, I created and updated my profiles on professional platforms such as GitHub, LinkedIn, and Kaggle, ResearchGate, StackOverflow.

Each platform serves a different purpose in building a digital presence. GitHub is used to showcase projects and technical work, LinkedIn helps in building a professional network and maintaining an academic profile, and Kaggle is useful for exploring data-related work. ResearchGate is where researchers share papers, collaborate, and stay updated with academic work. Stack Overflow is a community-based platform where developers ask questions, share solutions, and solve coding problems.

The main aim of this task was to understand the importance of having a strong digital identity. I ensured that my profiles were simple, accurate, and professional.

Through this activity, I realized how these platforms can help in career development. Over the next four years, I plan to regularly update my profiles by adding projects, improving my skills, and connecting with professionals. This will help me prepare for future internships and job opportunities.

Task-3

In this task, I explored both coding and collaboration platforms. Firstly, I completed a beginner-level coding problem on HackerRank, which helped me understand how coding practice platforms work and improve my problem-solving skills.

Secondly, I created a Google Form titled “Digital Literacy Awareness Quiz” consisting of five questions. The form was linked to a response sheet to collect and analyze answers. This helped me understand how online tools can be used for collaboration and data collection. link of the Form: https://forms.gle/uyCJQoveCAhq1oZP9

Through this task, I gained basic knowledge of coding practice and learned how digital tools can support academic activities. These platforms will be useful for improving my skills and working efficiently in the future.

Task-4

In this task, I focused on professional communication and digital etiquette. I drafted two emails—one requesting an extension for an assignment from a professor and another expressing interest in a summer internship opportunity. These emails follow the correct format, tone, and structure required for professional communication.

I also created a checklist of do’s and don’ts for responsible social media usage among students. This task helped me understand the importance of clear communication and maintaining a professional image online. Poor communication can lead to misunderstandings, while proper etiquette helps in building a positive impression.

Task-5

In this task, I explored the topic of cybercrime, specifically UPI/Online Payment Fraud. While researching this topic, I was surprised by how easily people can be tricked into sharing sensitive information or approving fraudulent transactions.

This task made me more aware of the risks involved in online payments and the importance of being cautious. One habit I will change is being more careful before clicking on links or approving payment requests. I will also ensure that I never share my OTP or UPI PIN with anyone.

Overall, this task helped me understand the importance of staying alert and following safe practices while using digital platforms.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use various digital tools, maintain a professional online presence, and communicate effectively. The tasks also made me aware of online safety and cybercrime prevention.

Overall, this project improved my practical knowledge and gave me useful skills that will help me in my academic journey and future career. It also encouraged me to use digital platforms responsibly and effectively.
